School Chairs

The TherAdapt® **School Chairs** provide a simple seating solution for physically challenged children with mild to moderate involvement. It is available in nine sizes and will fit a variety of users and settings. This chair is an excellent choice when a standard classroom or play table chair does not provide sufficient support. The modular design of the chair allows it to be customized to the individual needs of the user without the look of a "therapeutic" chair.

The TherAdapt® School Chairs come standard with a 1" pelvic positioning belt, and feature a height and depth adjustable slip-resistant, padded seat. The chair can be ordered with either a flat seat or a 10° anterior angle seat to promote therapeutic positioning and aid in independent transfers. All of the **Wide** and **X-Wide School Chairs** are reinforced with a steel support bracket under the seat.

A.

OPTIONS

A. A depth adjustable quick release **Tray** is available to provide a large work surface and additional upper extremity support and positioning.
Note: Armrests must be ordered to attach **Tray.**

B. Adjustable height **Armrests** are available for upper extremity support and positioning. They provide a stable base for sit to stand activities as well. The armrests are slotted to accommodate the side pads. Armrest height (C1) for all sizes is 3½" - 11".

C. A **Butterfly Kit** is available for anterior chest support. It attaches to the padded back and can be adjusted for a customized fit.

D. The 10° **Anterior Angle Seat** assists in promoting an anterior pelvic tilt and better spinal alignment.

E. A height and depth **Adjustable Footplate Low** and **High** allow the School Chair to be set at the correct height for use at a non-adjustable table or desk, while providing proper lower extremity positioning. The **Adjustable Footplate-Low** (E1) sits close to the floor and allows for stand-pivot transfers. The **Adjustable Footplate-High** (E2) offers more height adjustability when the chair is in use at tall desks or tables. Both Footplates attach to the chair and come complete with four interchangeable straps with curved, side release buckles for ease in use. The angle can also be adjusted to accommodate plantar flexion contractures or foot deformities. The depth adjustment allows the knees to be positioned at a 90° angle.

F. A padded **Pommel** is available to provide medial thigh support for children who tend to "cross" or adduct their legs.

G. 3" or 4" high **Side Pads** are available to provide lateral pelvic stability or to narrow the width of the chair.
Note: Armrests must be ordered to attach **Side Pads.**

H. The **Support Back** was designed to promote a sense of midline positioning and stability. It comes complete with a back pad, adjustable height and width lateral trunk pads, and a chest strap. It can retrofit all previously purchased School Chairs by simply removing the standard padded back and replacing it with this new back.

ACCESSORIES

I. A **Mobile Base,** with locking caster wheels, is available to transport the School Chairs. Please note that the Mobile Base does not attach to the School Chairs and is meant for moving the chair when unoccupied. The addition of a **Mobile Base** will raise the chair 3½". For more information and specific sizes, see page 93.
