## Force G

Top End® Force™ G shown with optional Spinerge® wheels.

Back is adjustable from 55 to 90 degrees.

### The Top End Force G is a jet

The aerodynamic Force™ G design offers an adjustable, trunk-powered, erect position for low paras, amputees, and competitors who can "gut" it out using abdominal, arm, shoulder and chest muscles. The Force G features the same internal rib center frame design as the Force to make it super stiff with easy transfers. The adjustable back angle (55-90 degrees), back height, leg rests, crank height and fore/aft seat position allow you to dial in your ultimate power position. Check out our professional series, cassette, brake and chainring upgrades and time trial wheel package for maximum performance and speed. Can you force the pace? Yes, you can\*. Get the Top End Force G. You will fly like a jet.

The manual upper derailleur system is easy-to-operate and takes the guess work out of the chain rings.

Shimano® RapidFire hands-on shifter/brake delivers smooth, responsive shifting and braking right at your fingertips.

Drafting bumper is required for racing and will ensure that no one follows too close.

Adjustable crank height is standard on the Force G.
