Purpose

The Skil-Care activity aids are designed for patients with decreased cognitive function and the need for tactile stimulation. The activity aids help engage and stimulate. They are reusable, machine washable and secured in place.

Easy to Use

The activities are useful in the redeveloping motor skills. Threading of shoestrings and buttoning buttons target skill areas for improved coordination. The colors and different textures provide visual and tactile stimulation.

Easy Care

The items can be laundered at temperatures below 180°F (82°C). We recommend placing the item in a mesh laundry bag.
