

sanitizing **solutions**

PRODUCTS CATALOG

ServeCo International™, a 33-year provider of home and furniture cleaning and maintenance products, is proud to launch ServeCare.

ServeCare is a line of products to sanitize skin, furniture and complete environments.

At the center of our philosophy is a desire to produce an alternative to alcohol based products that: damage skin and surfaces, are flammable, are becoming more scarce and expensive, only have limited performance period and produce a low yield when calculated on a per application ratio.

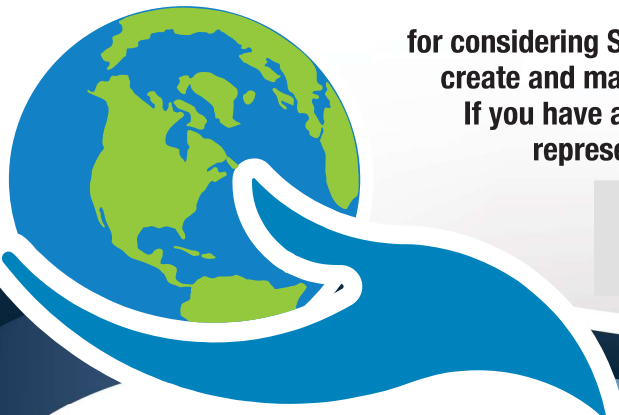

Our affiliate chemical partners are creating benzalkonium chloride as the active ingredient in our offerings. **Benzalkonium chloride** is recognized by the FDA as an acceptable ingredient in health care facility sanitation and because we are the original producer of the compound, its availability and cost are unparalleled when considering comparable products.

Our skin products are dispensed in a **FOAM** (produces the greatest yield) or in a **GEL** (supersedes alcohol yields and is delicate on skin). Our furniture products have been designed with a pH balance and blend of nonactive ingredients to effectively sanitize and not damage the intended surface.

Everchanging global supply chains and the scarcity of polypropylene have made the procurement of bottles challenging in today's environment. ServeCo International is using its seven (7) global offices to identify and secure new dispensing options. Because of demand for core components, payment terms have been difficult to obtain, and pre-payment is mostly required. We will make every effort to extend the best possible terms to our customers, but please know that they likely will not reflect previously negotiated terms on products sold. Also, please note that bottle and dispenser scarcity may lead to limited supply on some items and price volatility. We will be updating our price list regularly to reflect any changes.

Thank you

for considering ServeCare as a solution for your desire to create and maintain and comfortable environments. If you have any questions, please ask your sales representative or contact me directly.

All products are sold in the bottle descriptions that follow, as well as in below containers:

1 GALLON

5 GALLON

265 GALLON (TOTE)

hand sanitizer

water based foam

***Check with your representative for private label options**

- YIELD: 46 applications per ounce.
Compared to 16 applications per ounce for gel alcohol.
- Because of the global scarcity of foaming dispensers, please check the availability of these products prior to ordering.
