Instructions and Care Plan for the Comfy™
FINGER EXTENDER HAND ORTHOSIS (F-101 or F102)

1. Write patient's last name on splint cover and open Velcro straps.

2. After Passive Range of Motion (PROM) to allow maximum wrist and finger extension, place splint along the inside flexor surface of the hand.

3. Adjust the wrist to the degree of flexion/extension desired. The Comfy™ finger extender Orthosis can be adjusted and readjusted to different degrees of extension or flexion of the wrist as desired. Merely press the Orthosis against a firm edge (e.g., table, countertop or chair edge) while firmly holding and leaning on both ends. Do not remove insert from fabric cover, as all positioning can be done while the insert is in the cover. Several adjustments can be performed rapidly to obtain the desired optimal angulation.

4. If fingers are flexed tightly over the top of the splint and there is not enough finger extension to use an insert, use the splint with no insert. In this way the splint will keep finger and nails away from the palmar surface and prevent skin breakdown and infection.

5. If fingers can be extended more, use the smaller or larger inserts. To put on the insert, simply put the right wing of the Orthosis into the opening in the bottom of the insert as shown in the diagram above. Push as far to the right as possible. Insert left wing into the opening at the bottom of insert. Center insert. The cover is placed around the insert with the Comfy™ label in the back, and closed at the bottom with Velcro. The elastic strap goes over the patient's fingers.

6. If increased extension is desired, remove smaller insert, and place larger insert over the wings as detailed in step 5.

7. Once the desired wrist angulation and finger extension have been obtained, secure splint on hand and wrist with Velcro straps. Place elastic strap over fingers to prevent fingers from moving.

8. Check Comfy splint every two hours for pressure areas, edema, or skin irritation. If signs of redness, increased swelling or pain appear, discontinue use and notify physician.

9. The Terry-cloth cover can be washed by hand or machine in lukewarm water. Do not use bleach or hot water. Air or tumble dry on cool or warm setting. The insert can be cleaned by wiping both sides with a solution of warm water and detergent or with disinfectant. If any of the metal frame becomes exposed, cease using the device.

**Comfy™ Finger-Extender Hand Orthosis requires a physician prescription and should be applied and supervised by a trained healthcare professional. If any of the metal frame becomes exposed, cease using the device.**

**CARE PLAN**

**INTRODUCTION:** The Comfy™ Hand Orthosis is a patient specific product that can be easily fitted and labeled for single patient use upon order of a physician. It should be used only in connection with a care plan and custom fitting instructions by a trained health care professional.

**INDICATIONS:** This Splint is to be used to position and support hands that present with Wrist, MP, PIP or DIP flexion pattern, ulnar deviation, wrist drop, ulnar deviation, arthritic changes or any deformity related to neuromuscular impairment.

**RESULTS:** The Comfy™ Hand Orthosis will help increase/maintain wrist, MP, PIP and DIP extension. It also prevents further deformity, maximizes ROM, and maintains maintenance of good hygiene of the involved extremity easier. The Terry cloth cover helps absorb moisture and allows for air circulation, thereby helping prevent skin maceration.

**CONTRA-INDICATIONS:** The Comfy™ Hand Orthosis should not be used if the patient has any circulatory problems, pressure areas or skin irritations.

**FITTING INSTRUCTIONS:** The Comfy® Hand Orthosis should be applied and fitted only by a trained professional. Fit and shape Orthosis according to patient’s requirements and as indicated in instructions. Check Orthosis fit and place two fingers under strap to ensure strap is not too tight.

**WEARING TOLERANCE:** Check Orthosis at least every two hours until removed, to see if there are any problems such as skin abrasions, redness, blisters, or increased edema (if straps are too tight). With patients who have sensory deficits, the Orthosis should be checked more frequently.

**MAINTENANCE OF ORTHOSIS:** The Cover of this Comfy™ Orthosis is designed to be removable for laundering. The fabric cover can be washed by hand or by machine in lukewarm water. Do not use bleach or hot water. Air or tumble dry on cool or warm setting. The bend-able white insert can be cleaned by wiping both sides with a solution of warm water and detergent or with disinfectant. If any of the metal frame becomes exposed, cease using the device.

The Comfy™ Hand Orthosis requires a physician prescription and should be applied and supervised by a trained healthcare professional.

*If signs of redness, swelling or pain appear discontinue use, and notify physician.*

### Treatment Goals

- Prevent Fixed Contractures
- Support Flaccid Hand, Wrist, or Elbow
- Manage Arthritic Joint Deformities
- Decrease pain
- Control Ulnar or Radial Deviation
- Improve Muscle Strength
- Improve A.D.L. Function
- Increase Range Of Motion
- Decrease Pressure Areas
- Increase Hygiene
- Increase U.E. function

### Treatment Plan:

- Wrist-Hand-Finger Orthosis (H101)
- Finger Separator (FS1)
- Hand Thumb Orthosis (HT101)
- Finger Extender Hand Orthosis (F101)
- Long Pan Hand Orthosis (LPH101)
- Long Opponens Hand Orthosis (LOPH101)
- Dorsal hand Orthosis (DORS101)
- Opposition Thumb Hand (OPH101)
- Comfy Grip hand Orthosis (OPH101)
- Slim Hand (CHSlim)
- Slim Wrist (CWSlim)
- Spring Loaded hand Orthosis (SH101)
- Deviation Standard Hand (DH101)
- Deviation Finger Extender (DF101)
- Elbow Hand Combination (EH101)
- Elbow Orthosis (E101)
- Goniometer Elbow Orth. (GE101)
- Push Button Goni. Elbow (PBGE101)
- Spring Loaded Elbow (SEI01)
- Adjust Hinge Elbow Orthosis (Adj-E101)
- Dynamic Torque Elbow Orth. (Torq1-E)

Observe from 15 min to 30 min intervals; Then Graduate to 1-2 hr Intervals; Remove and check for pressure areas every shift.

I certify active treatment of this patient. This equipment is part of my recommended treatment and is "reasonable and medically necessary". The above information is true and accurate, to the best of my knowledge.
