

Materials

Mesh with Anti-Microbial Coating

- Highly durable, open-weave polyester blend
- Manufactured for strength
- Mesh slings have quick drying properties and are highly breathable
- Slings made of this fabric are washable

Polyester SlipFit (PolySlip)

- Smooth knitted polyester fabric that can stretch providing ease of application and added comfort
- Includes outer leg sections of 'slip fit' nylon material with low friction properties allowing it to be fitted / removed more easily

Polyester Mesh (Mesh / Poly) with Anti-Microbial Coating

- Polyester mesh is combined with smooth polyester layer and non-absorbent padding on inner leg sections
- Ideal for use in swimming pools and for showering while the sling is in position

Disposable

- Designed for single patient use, this non-woven, stitch-bond polyester is strong, highly breathable, and liquid repellent
- Can be spot cleaned of light soiling; disposable fabric slings are designed to be left in place

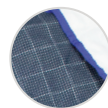

Polyester (Poly) with Anti-Microbial Coating

- Highly durable, closed weave fabric manufactured for strength
- Slings made of this fabric are washable and have an anti-microbial coating
- Some of our Polyester slings offer open-cell foam padding in the leg supports and optional head supports.

Spacer

- Multi-directional stretch
- Wicks away moisture
- May be suitable for those with skin integrity issues
- May provide a more comfortable fit for those in pain

Quilted Mesh (Quilted)

- Our Quilted Mesh fabric slings have a unique blend of quilted open cell foam and polyester that provides increased comfort for users and reduces bunching under the legs
- Highly durable and constructed to be permeable, allowing for air and water to pass through
- Easily washable when needed
- Seated style transfers slings have the body of Mesh material and the leg supports of Quilted Mesh material

Padded with Anti-Microbial Coating

- Padded polyester leg bands with increased comfort
