The TurnTable can be used for seated transfers between wheelchair and bed, toilet or chair/armchair. For increased security, the TurnTable can be used together with FlexiBelt/EasyBelt. TurnTable is available in two sizes with handles for convenient carrying, and one size without handle for tight spaces.

The TurnTable is part of a series of different models of transfer assistive devices. The choice of model and material is determined by the patient’s functional capacity and the situations in which the product is to be used.

RoMedic’s products together form the SystemRoMedic concept, which takes a holistic approach to patient transfers. SystemRoMedic has four categories of transfers: transfer, positioning, support and lifting.

---

**Functional inspection**

**Visual inspection**

Check the condition and function of the product regularly. Check to ensure that the material is not worn, damaged or bleached. If there are signs of wear, the product must be discarded.

---

**Always read the instructions**

Read instructions for all assistive devices used in connection with transfers.

To prevent discomfort, exercise care and caution when using the product.
Placement and use TurnTable

Place the TurnTable on the floor beside the patient. Secure the TurnTable in place, before raising the patient, by placing the ball of your foot on the turntable and your heel on the floor. Steer the TurnTable by pushing with the front of the foot and braking with the heel. When the patient is about to sit down, secure the TurnTable in place as described above.

When transferring from bed to wheelchair, place the wheelchair close to the bed, so as to minimize transfer distance.

When transferring to the toilet, place the wheelchair close to the toilet, so as to minimize transfer distance. Pull the patient’s pants up/down when the patient has risen slightly from the seat. Preferably, two caregivers should assist.

Care of the product:

Clean and disinfect the surface of the product by hand.
