

# SafeStraw™ - A Volume Limiting Drinking Aid

Bionix SafeStraw allows healthcare providers to safely manage swallowed liquid volume and help reduce aspiration of patients with oral motor dysfunction.

## ► PROBLEM:

Patients with oral motor dysfunction have difficulty controlling a liquid bolus and often swallowed prematurely causing them to aspirate.

## ► SOLUTION:

SafeStraw limits volume to a teaspoon, or 6.2 ml's, per sip helping to reduce the likelihood of aspiration by promoting a controllable liquid bolus.

## ► RESULTS:

Limited bolus size helps reduce aspiration risks allowing patients to safely, discreetly, and independently drink from a variety of containers such as cups and bottles.

### PRODUCT OFFERING

**1500 - Box of 12 White, Thin Liquid SafeStraws**

**1510 - Box of 12 Blue, Thick Liquid SafeStraws**

**1520 - Variety Pack** (6 White and 6 Blue SafeStraws)

By limiting volume per suck, it has also prevented aspiration in my patients who have decreased oral motor control following a stroke. It makes my patients feel safe and dignified, as they are able to discreetly use the device in restaurants after leaving the hospital.

- Jennifer Hanners, SLP
