

ShotBlocker®

Bionix ShotBlocker helps healthcare providers minimize needle injection pain associated with injection administration at half the cost of the status quo.

► PROBLEM:

Needle apprehension and pain can create anxiety associated with injections for all patients, children through adults. Anesthetic creams and freezing sprays can be costly, can damage the skin, and take time before working.

► SOLUTION:

ShotBlocker, a novel application of the Gate Theory of Pain Management, uses a number of blunt contact points to saturate the sensory signals around an injection site distracting the patient from the pain signals associated with the needle poke.

► RESULTS:

A simple, non-invasive, drug free method that instantly reduces needle pain and anxiety at half the cost of other methods.

PRODUCT OFFERING

#8050 - Box of 50 ShotBlockers

#8100 - Box of 100 ShotBlockers

©2016 Bionix Development Corp. US Patent # 6,902,554.

“

One of the most awesome devices to alleviate the pain from shots. We have patients coming in asking for ShotBlocker by name, because of the prior experience.
