

ViscoHeel®

Viscoelastic heel cushions for relief of tendons, ligaments and joints.

ViscoHeel®

Right/left versions.
Comes as a pair.

ViscoHeel®

helps relieve Achilles tendinitis and Haglund's deformity

Heel pain can occur even if the cause of the pain is above the calcaneus. The soft ViscoHeel heel cushions provide immediate pain relief and protect your joints, tendons and ligaments with every step you take.

Now with an improved profile...

The new anatomical design supports the hindfoot. The shape smoothly tapers toward the midfoot, facilitating a natural heel-to-toe movement.

The new PowerWave look...

clearly shows the soft bedding and gentle heel guidance.

The new size system...

for better anatomical fit with more sizes.

The new right and left specific versions ...

offer a better flush fit in the shoe. Allowing the shoe, heel cushion and foot, to form one stable unit.

Indications

- Osteoarthritis in the joints of the lower leg (shock-absorbing effect)
- Achilles tendinitis
- Haglund's deformity-partial relief
- Leg length differences up to approx. 1/3 inch by wearing one cushion

The new brushed surface...

reduces resistance and slides easily into the shoe.

ViscoHeel (right/left)

Item no.: 1301702200000*
